Executive Summary Report
Global Superstore – Sales & Profitability Dashboard
Prepared by: Enoch Tawiah Acquaye, Junior BI Analyst | October 2026

Purpose and scope
This report summarizes the findings of an interactive Power BI dashboard built on the Global Superstore dataset: 51,290 order lines covering 25,035 orders, 147 countries and seven markets, from January 2011 to December 2014. The dashboard answers where sales and profit come from, which products and customers perform best, how performance has changed over time, and what management should do next. Figures are assumed to be in US dollars, as the data carries no currency label.

Headline performance

$12.64M	$1.47M	25,035	$246.49	11.6%
Total Sales	Total Profit	Total Orders	Average Sales	Profit Margin

The business is large and growing sales rose from $2.26M in 2011 to $4.30M in 2014. Profit has grown at the same pace, so the overall margin has stayed at roughly 11–12% throughout. Growth has not yet made the business more profitable per dollar of sales.

Key findings

- **Technology leads.** It generates $4.74M in sales and $664K in profit (14.0% margin). Furniture earns similar sales ($4.11M) but only a 6.9% margin.
- **Tables is the only loss-making sub-category** (−$64K), and it carries an average discount of 29.1%, double the company average of 14.3%.
- **Central is the largest region** ($2.82M sales, $311K profit), but margins range from 19.5% in North Asia to just 2.0% in Southeast Asia.
- **Consumers provide 51.5% of sales,** yet all three segments earn nearly identical margins (11.5–12.0%).
- **Discounting is the biggest profit leak.** Orders with no discount earn a 25.3% margin; those discounted above 40% lose 74.1%.

Risks and opportunities

Risks. (1) Orders discounted above 20% make up 15.3% of sales but lose about $815K, more than half of total profit. (2) 29 of 147 countries lose money, about $448K combined, led by Turkey, Nigeria, the Netherlands and Honduras. (3) Southeast Asia and EMEA earn margins of only 2.0% and 5.4%, and 678 of 3,788 products lose money.

Opportunities. (1) Grow Technology, especially Copiers (17.1% margin, the top profit sub-category at $259K). (2) Replicate high-margin markets such as North Asia, Central Asia and Canada, where Canada is barely developed at $67K of sales. (3) Fix discounting and Furniture pricing: lifting Furniture from 6.9% to 14% would add roughly $290K at current sales (illustrative).

Priority recommendations

#	Recommendation	Evidence / target KPI
1	Cap standard discounts at 20%; require approval above it	Discounts >20% lose ~$815K. Target: <5% of sales above 20% discount
2	Reprice or restructure Tables	−$64K loss, 29.1% avg discount. Target: margin ≥ 0%

#	Recommendation	Evidence / target KPI
3	Review loss-making countries (Turkey, Nigeria, Netherlands, Honduras)	29 of 147 countries lose ~$448K. Fix or exit within two quarters
4	Recover margin in Southeast Asia and EMEA	2.0% and 5.4% margin vs 11.6% overall. Target: ≥ 8%
5	Make profit margin a core management KPI; review the dashboard monthly	Sales grew 18–27% a year, margin flat at 11–12%. Target: toward 14%

Next steps. Approve the discount policy and margin reporting within 30 days, start the Tables and country reviews within 90 days, and use the dashboard in monthly management reviews to track progress against the targets above.

Notes and limitations

Findings describe 2011–2014 performance. Discounts and loss move together, but other costs such as shipping may also contribute, so the results suggest rather than prove cause. Impacts overlap, so the individual loss figures should not be added together. Targets are proposals for management to confirm.
